Dear Mrs. Schafer:

We received yor answer to our first letter which we really appreciate. Now here is our second letter with aerial photos from part of Ponce West side of the city of Ponce which you can noticed that our worry is justified. This photos were taken about three months ago.

Beside this photos Cecos International is building new facilities in an area which the original cells weren't.

Further more, at present they are burying in the ground slops from ships and oil refineries established in the East Side and residues from tuna fish factories established in the West Side of P.R. among others. We understand that they want to prove that a Hazardous Waste Disposal dump was established when we get the Public Hearings.

We are including a copy of an incident that happened to a child which proves that isn't as secure as they claim to be, above or underground.

We want you to understand that we are going to responsabilize the Government of Puerto Rico, Ponce Municipal Authorities, Cecos International, and your Agencies to any future effects adverse to our Health our our standards of living.

We request from you an immediate investigation of all these activities and what's all about.

We see no reasons for such burocracy regarding this matter, when the future of the whole city of Ponce is involved.

Very truly yours,

Committee for a Better Environment
of Ponce
